The alpha-conotoxins are useful for preparing a pharmaceutical composition for treating disorders regulated at neuronal nAChR, especially alpha 3 beta 2, alpha 3 beta 4 or alpha 7-containing nAChR. Disorders that can be treated include cardiovascular disorders, a gastric motility disorder, urinary incontinence, nicotine addiction, a mood disorder or small cell lung carcinoma. Mood disorders include bipolar disorder, unipolar depression, dysthymia and seasonal effective disorder. The alpha-conotoxins can also be used for diagnosis of small cell lung carcinoma.
The present sequence represents a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The alpha-conotoxin antagonists are able to discriminate between non-symmetrical ligand binding interfaces present on the nAChR. The alpha-conotoxin has the ability to potently block any receptor containing a alpha beta subunit interface, regardless of what other subunits may be present in the receptor complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  alpha 3 beta 4 or alpha 7-containing nAChR. Disorders that can be treated include cardiovascular disorders, a gastric motility disorder, urinary incontinence, nicotine addiction, a mood disorder or small cell lung cardinoma. Mood disorders include bipolar disorder, unipolar depression, dysthymia and seasonal effective disorder. The alphaconotoxins can also be used for diagnosis of small cell lung cardinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                are useful for preparing a pharmaceutical composition for disorders regulated at neuronal nAChR, especially alpha 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              alpha-conotoxin, which can be used to treat disorders regulated at neuronal nicotinic acetylcholine receptors (nAChR).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    depression, dysthymia and seasonal effective disorder. The alphaconotoxins can also be used for diagnosis of small cell lung carcinoma. The alpha-conotoxin antagonists are able to discriminate between nonsymmetrical ligand binding interfaces present on the nAChR. The alphaconotoxin has the ability to potently block any receptor containing a alpha beta subunit interface, regardless of what other subunits may be present in the receptor complex.
                                                                                                                                                                                                                                                                                                                                                                            WPI;
                                                                                                                                                                                                                                                                                                   Screening for a neurotrophic factor mimetic, useful for treating, cancer and Alzheimer's, comprises combining a candidate mimetic \mathbf{w} fragment of a tyrosine kinase protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               neurotrophic factor; NTF; mimetic; Huntington's disease; Parkinson's disease; Alzheimer's disease; amyotrophic lateral sclerosis; neurodegenerative disease; cancer;
             (receptor tyrosine kinase) protein, and of modulating the activity of a Trk protein. The invention concerns Trks and their ligands that modulate cell growth, differentiation and survival Trk proteins are known to mediate the activities of neurotrophins and are also known proto-oncogenes. Methods are claimed for screening for small molecule neurotrophic factor minetics capable of binding to a Trk protein or of modulating the binding of a neurotrophin to a Trk protein. Also claimed are medicaments comprising the present cyclic peptide for treatment of cancer or neurodegenerative disease selected from Huntington's disease,
                                                                                                                                                                                       The present sequence is that of a naturally-occurring cyclic peptide from the tropical snail Conus pennaceus shell. The peptide is capable of modulating the binding of a neurotrophin to a Trk

                                                                                                                                                 The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone small. These peptides are found in minute quantities in the venom of the smalls, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic acetylcholine receptors, including cardiovascular disorders, gastric acetylcholine receptors, including cardiovascular disorders, gastric

The alpha-conotoxin has the ability to potently block any receptor containing a alpha beta subunit interface, regardless of what other subunits may be present in the receptor complex.

The alpha-conotoxin antagonists are able to discriminate between non-symmetrical ligand binding interfaces pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               gastric motility disorder, urinary incontinence, nicotine addiction, a mood disorder or small cell lung carcinoma. Mood disorders include bipolar disorder, unipolar depression, dysthymia and seasonal effective disorder. The alpha-conotoxins can also be used for diagnosis of small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a specifically claimed example of an alpha conotoxin from the general formula given in AAY2415, which can be used to treat disorders regulated at neuronal nicotinic acetylcholine receptors (nAChR). The alpha-conotoxins are useful for preparing a pharmaceutical composition for treating disorders regulated at neuronal nAChR, especially alpha 3 beta 2, alpha 3 beta 4 or alpha 7-containing nAChR. Disorders that can be treated include cardiovascular disorders, a natural section of the cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Alpha-conotoxin; neuronal nicotinic acetylcholine receptor; nAchR; small cell ling carcinoma; cardiovascular disorder; nicotine addiction; gastric motility disorder; urinary incontinence; mood disorder; bipolar disorder; unipolar depression; dysthymia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotthic acetylcholine receptors of the nervous system. They usually contain two disaliphide bonds, which give the nervous system. They usually contain two disaliphide bonds, which give

                                                                                                                                                                                                                                                                                                                                                            nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic and for treating disorders regulated at the neuronal nicotinic activities are compared to the receptors, including cardiovascular disorders, gastric metality disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             motility disorders, urinary incontinence, nicotine addiction, mood disorders such as bipolar disorder, unipolar depression, dysthymia and seasonal affective disorder, and small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the

                                                                                                                        The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snall. These peptides are found in minute quantities in the venom of the snalls, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The

                                                                        The kappa-conotoxin, alpha conotoxin and alpha-like conotoxin peptides all belong to a group of peptides known as the A-lineage conotoxin peptides. The A-lineage conotoxin peptides have a wide variety of pharmacological uses. The A-lineage conotoxin peptides claimed (AAR75264-R75293) are useful for the inhibition of synaptic transmission at neuromuscular junctions by blocking nicotinic acetyl choline receptors and they also have activity against voltage-gated choline receptors

                                                                                                                                                                                                                                                  alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic acetylcholine receptors, including cardiovascular disorders, gastric motility disorders, uninary incontinence, nicotine addiction, mood disorders such as bipolar disorder, unipolar depression, dysthymia and
                                                                                                                                                                                                                                                                                                                      The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snall. These peptides are found in minute quantities in the venom of the snalls, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The

                                                                                                                                                                                                                             The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic acetylcholine receptors, including cardiovascular disorders, gastric motility disorders, uninary incontinence, nicotine addiction, mood disorders such as bipolar disorder, unipolar depression, dysthymia and seasonal affective disorder, and small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 39; Page 34; 229pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     -!- FUNCTION: Alpha-conotoxins act on postsynaptic membranes, bind to the nicotinic acetylcholine receptors (nAChR) and inhibit them (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom duct.
-!- SIMILARITY: BELONGS TO THE A-SUPERFAMILY OF CONOTOXINS. A
                                                                                                                                   Peptides 20:1139-1144(1999).
